Control Master

Powered by
KERRIDGE Automotive Systems

The Control Master is a versatile fluid management system. Its modular design allows it to be installed in applications varying from small single product dispensing systems up to a multi outlet system with up to 8 products monitored and up to 64 outlets.

Access via the remotely sited network linked keypads is controlled by secure PIN numbers.

Transaction/Management data, stock values etc are all accessible through customers P.C. with system interface connection and software installed.

Secure controlled access to achieve product accountability and profit centre protection!

Integration to **Kerridge Autoline (Revision 8)** means that when oil is dispensed using the Samoa Control Master Management system, the transactions are automatically recorded into the dealer management system.

Autoline point of sale allows a quick and easy process for issuing transactions direct to the vehicle. With a clear audit trail of all transactions, dealership management can accurately control and report any oil not fully issued to a vehicle reducing the amount of oil dispensed that never gets invoiced to a customer.

This in turn will increase the profitability of the service department. For further information please consult your Kerridge account manager"

Total Secure **Oil Monitoring**
